

## ABSTRACT OF THE DISCLOSURE

Run data of a bicycle and personal information of a user are input in a bicycle computer. A display part of the bicycle computer has upper and lower lines, which can be set to desired display sizes. A screen unknown to the user is prepared in the display part of the bicycle computer. When the user enters his name and the data of birth in the bicycle computer, the display part displays a message "happy birthday to you" on the corresponding day.
